# Candidate

Global Catalyst

## PROFESSIONAL SUMMARY

*Results-driven Analytics Engineer with expertise in machine learning, MLOps, and data engineering, leveraging proficiency in Python, Databricks, and AWS to drive data-driven decision-making in the biopharma industry. Proven ability to collaborate with cross-functional teams, develop predictive models, and provide actionable recommendations. Skilled in handling large-scale structured and unstructured data sets, with a strong understanding of experimental design, hypothesis testing, and A/B testing methodologies.*

## EXPERIENCE

### Optimized Role

Active – Present

*Professional Experience*

- Architected and deployed scalable data pipelines for machine learning solutions, ensuring 99.9% uptime and ~ 20% increase in data processing efficiency, utilizing Databricks and AWS
- Built and maintained a suite of data engineering tools, leveraging Python and R, to enhance data scientist productivity by ~ 30% and facilitate collaboration across a team of 5
- Led the exploration and analysis of large-scale clinical trials, patient records, and genetic data, utilizing SQL, NoSQL, and data visualization tools like Tableau and Power BI to uncover insights and drive business decisions

## SKILLS

Databricks | AWS | scalable data pipelines | Python | R | data engineering tools | clinical trials | patient records | genetic data | SQL | NoSQL | Tableau | Power BI
